

Tutorial Running Laravel Tanpa Artisan Di Localhost Xampp

1. Buka project Laravel
2. Buka folder public dan temukan file dengan nama .htaccess & index.php
3. Pindahkan .htaccess dan index.php ke folder root project
4. Konfigurasi file index.php dan save perubahan

Awal :

```
if (file_exists($maintenance = __DIR__.'/../storage/framework/maintenance.php')) {  
    require $maintenance;  
}
```

Menjadi :

```
if (file_exists($maintenance = __DIR__.'/storage/framework/maintenance.php'))  
    require $maintenance;  
}
```

Awal :

```
require __DIR__.'/../vendor/autoload.php';|
```

Menjadi :

```
*/  
  
- require __DIR__.'/vendor/autoload.php';  
  
/*
```

Awal :

```
$app = require_once __DIR__.'/../bootstrap/app.php';
```

Menjadi :

```
$app = require_once __DIR__.'/bootstrap/app.php';
```

5. Konfigurasi file
vendor/laravel/framework/src/illuminate/Foundation/**helpers.php** dan simpan perubahan tersebut.

Awal :

```
if (! function_exists('asset')) {  
    Comment Code  
    /**  
     * Generate an asset path for the application.  
     *  
     * @param string $path  
     * @param bool|null $secure  
     * @return string  
     */  
    269 references | Comment Code  
    function asset($path, $secure = null)  
    {  
        return app('url')->asset($path, $secure);  
    }  
}
```

Menjadi :

```
if (! function_exists('asset')) {  
    Comment Code  
    /**  
     * Generate an asset path for the application.  
     *  
     * @param string $path  
     * @param bool|null $secure  
     * @return string  
     */  
    269 references | Comment Code  
    function asset($path, $secure = null)  
    {  
        return app('url')->asset('public/' . $path, $secure);  
    }  
}
```

6. Tes menggunakan localhost di server dengan alamat url <http://alamat-server/namafolder>
